- ▶ **Integrate** with **new installations** or as customized **retrofits**
- ▶ **Reusable/relocatable**
- ▶ Use as an **additional layer** of **protection** against RPGs
- ▶ **Easy to store** and **low maintenance**
- ▶ **Epoxy** and **hot-galvanized** finishes available

Kontek's RPG Pre-Detonation Screen System is a series of interconnected angle-formed steel panels with nine-gauge steel mesh designed to provide protection against Rocket-Propelled Grenades (RPGs). Ideal for force protection in combat zones and use in high-risk and high security areas, the RPG Pre-Detonation Screen System is a simple but effective solution for enhancing the safety and security of critical personnel and infrastructure.

With its modular pre-fabricated panel system, Kontek's design of the RPG Pre-Detonation Screen System allows for the fabrication and assembly of custom-sized panels of varying configurations. Each panel can be provided with a durable and anti-corrosive epoxy finish. Hot-dip galvanized finish is available as an option as well.

**Kontek stands ready to meet the individual needs of our customers. We will design and certify products to meet any challenge. Contact us to learn more.**
